

SUPPORT™ L

Prevention *before* Treatment

LET'S GROW
TOGETHER

SUPPORT L is a series of aquafeeds based on a blend of functional ingredients that promote growth and survival in fish as well as bacterial disease resistance and prevention. This is done by balancing the microbial community in the fish gut.

SUPPORT L feeds have been tested thoroughly and successfully over the past 2 years, both at Aller Aqua Research and on more than 30 fish farms and various species under real life conditions. The field tests, which were monitored by veterinarian experts and pharmaceutical company specialists, included both saltwater and freshwater fish species and were carried out on farms where endemic bacterial diseases were present. Significantly reduced mortality because of disease reduction or elimination, as well as improved fish health and performance.

Support L is a product created for preventive use. Depending on the type of breeding and disease background, this feed can be used as seasonally and/or continuously, and it is recommended to start at least 30 days before the potential onset of a disease.

Microbial balancing

SUPPORT L reduces risk of bacterial disease outbreaks by supporting and preserving beneficial bacteria.

Improved health

SUPPORT L improves organ quality and health parameters, higher mucus production and increased gut integrity.

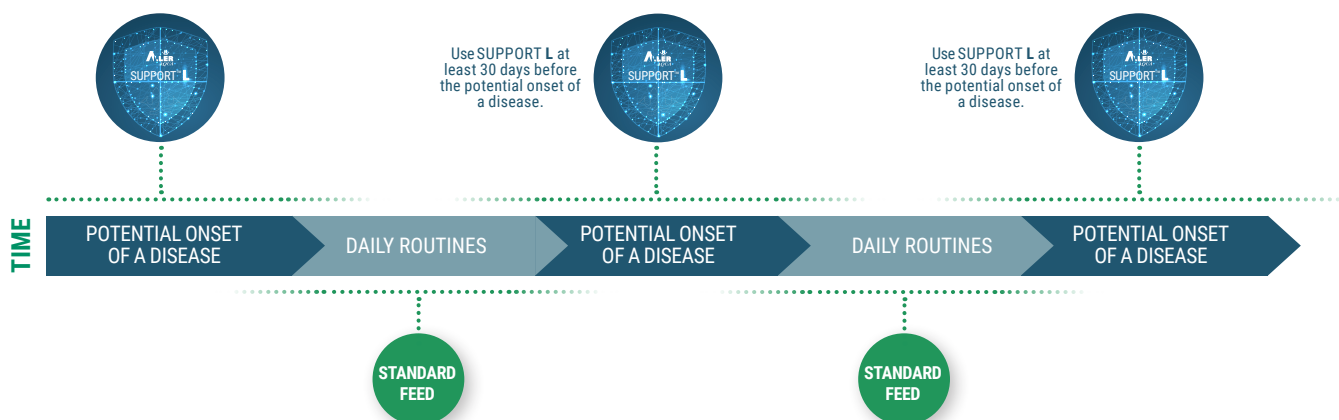

Long-term effectiveness

SUPPORT L can be used continuously, without the need to change feed, no exhaustion or side effects.

Increased production

SUPPORT L ensures lower FCR and higher growth, leading to higher farm turnover.

HIGH QUALITY FEED FOR AQUACULTURE

The background is a dark blue gradient with a complex network of glowing blue lines and dots, resembling a molecular or digital structure. A large, semi-transparent shield shape is on the left, containing a stylized 'L' made of grey bars. The text "SUPPORT™ L" is prominently displayed in white on the right side.
